

### Keeping Construction Jobsites Safe During the COVID-19 Pandemic

Protecting yourself from the spread of COVID-19 is just as important on the jobsite as it is at home. Due to the highly contagious nature of the virus, it's important that everyone on the jobsite does their/our part to ensure that we are protecting ourselves, our co-workers and in turn, our families, and the general public. Preventing the spread of COVID-19 starts before we all reach the jobsite and throughout our time on the jobsite.

#### How can we work together to keep our jobsites safe?

- Stay home if you are sick. If you are experiencing any of the following symptoms – fever, coughing or shortness of breath – seek medical attention and notify your supervisor or manager.
- Frequently wash your hands with soap and water for twenty (20) seconds. If running water is unavailable, use an alcohol-based hand sanitizer and/or wipes with at least 60% alcohol content.
- Clean and disinfect break/lunch areas, shared hand and power tools and machinery and equipment controls after use.
- Practice social distancing. Avoid standing or working within 6 feet of anyone on the jobsite, if possible.
- If 6 feet social distancing isn't possible, face shields are recommended.
- Face coverings are recommended, however check with your state and local site specific for any requirements.

**By following these tips, we ALL can help prevent the spread of COVID-19 and continue to work safely which will benefit you, your co-workers, family, and the general public.**
